Subject: Microsoft Settlement

Those of us who HAVE to work with Microsoft Windows every day consider the settlement a joke. Not only is it a poor OS but it's built-in control characteristics make it very difficult to use software like Netscape ie: Compare the connection times to the Internet using IE 5 vs. Netscape 4.7. There are MANY more examples. We can't wait for Redhat! Bill Gates has really let us down while he pursues his dream the GUI and other cumbersome and difficult applications.
